AUTOMATED INTEGRATION STANDARD — PRODUCTION ACTIVE

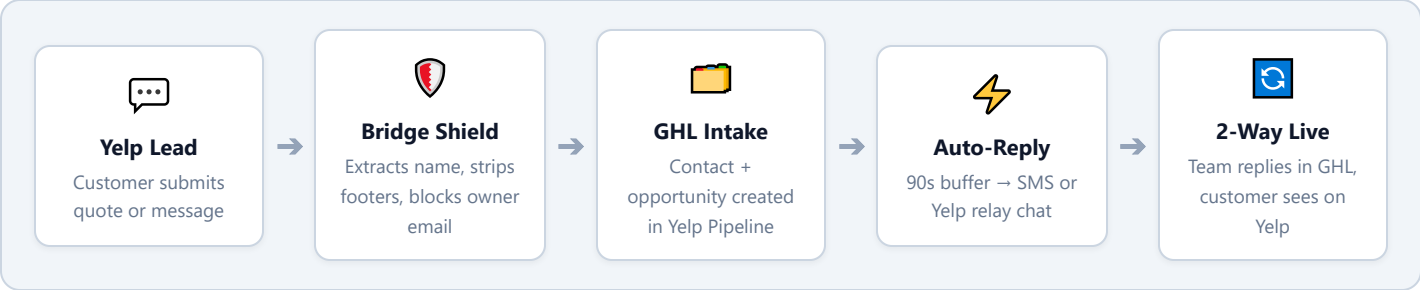

GoHighLevel ↔ Yelp Lead Bridge

Client Operational Blueprint: Real-time lead ingestion, 2-way live chat sync, smart channel routing, and full pipeline lifecycle management. No Yelp app login required.

Architecture: **2-Way Middleware Bridge** | Live Server: **cg-lead-bridge.onrender.com** | Sync Speed: **< 5 seconds** | Status: ✅ **Production Active**

LEAD INGESTION	2-WAY CHAT	OWNER SHIELD	CHANNEL ROUTING
< 5 Sec	**100% Unified**	**100% Protected**	**Smart Dual**
Real-time contact creation in GHL	Reply in GHL → delivered to Yelp	Staff emails never matched to leads	Auto SMS (if phone) or Yelp relay

1 End-to-End System Architecture

2 Lead Ingestion & Data Extraction

When a homeowner submits a quote request on Yelp, every field is captured automatically and stored in GHL before your team even sees the notification.

Extracted Field	GHL Custom Field	What Your Team Sees
Customer Name	contact.name	Auto-extracted — overrides masked "Yelp Inbox" labels.
Service Type	yelp_service_type	Deep Clean, Move-In/Out, Standard Recurring, Post-Construction.
Bedrooms & Bathrooms	yelp_bedrooms / yelp_bathrooms	Exact room counts from the homeowner's Yelp questionnaire.
Cleaning Frequency	yelp_cleaning_frequency	One-time, Weekly, Every 2 weeks, Monthly.
Customer Notes	yelp_notes__customer_request	Full text of special instructions, pets, square footage, focus areas.
Phone Number	contact.phone	Direct cell number (only if customer chose to share it).

Built-in Owner Email Shield: Yelp notification emails contain the manager/owner email in the footer. Our bridge automatically blacklists internal and staff emails so lead cards are never accidentally attached to your own contact profile.

3 Smart Auto-Responder & 2-Way Live Chat

⚡ The 90-Second Smart Auto-Responder

After a lead arrives, the system waits 90 seconds to allow Yelp to pass the customer's phone number. It then routes automatically:

- **Phone provided:** Instant SMS greeting asking for square footage and preferred days.
- **No phone (Yelp relay only):** Instant response sent directly into the customer's Yelp chat — no phone required.

💬 True 2-Way Live Chat — No Yelp Login Needed

Your staff never needs the Yelp Business app or shared login passwords:

- Yelp customer messages arrive as **Live Chat** bubbles in GHL Conversations.
- Replies typed in GHL are delivered back to the customer's Yelp app within 5 seconds.
- Complete conversation history stays in one place — GHL.

💡 **How to Reply to a Yelp Lead Inside GHL — Step by Step:**

1. Open **GoHighLevel** → **Conversations** and find the lead's card (it will appear as a **Live Chat** message).
2. In the message composer at the bottom of the thread, click the channel dropdown and select **Email** — this routes your reply through Yelp's secure masked relay address.
3. **Do NOT enter a Subject line.** Leave it blank. Simply type your message in the body field.
4. Hit **Send**. Your message is automatically delivered into the customer's Yelp chat interface within seconds.

⚠️ **Testing Guardrail:** When testing, always close **biz.yelp.com** and the Yelp for Business mobile app first. Yelp detects active sessions and suppresses email notifications — which stops Zapier from triggering and the bridge from receiving anything.

4 Dedicated Yelp Leads Pipeline

Every Yelp inquiry lands automatically on a dedicated visual Kanban board. Your team drags cards as conversations progress — full visibility at a glance.

Stage	Trigger	Purpose & Sales Action
1. New Leads	Auto	Lead arrives. Auto-responder fires. Awaiting first personalized reply from your team.
2. No Answer	Manual	Reached out but customer hasn't responded. Follow up with a call or text.
3. Quoted	Manual	Formal estimate or price has been shared via chat, email, or phone.
4. Follow Up (Manual)	Manual	Active lead — needs a personalized nudge, rebooking, or discount offer.
5. Follow Up (Automated)	Auto/Manual	Enrolled in a timed sequence of gentle reminders (3–5 day drip).
6. Interested, Not Booked	Manual	Customer interested but timing not right (e.g. wants service next month).
7. Not Qualified	Manual	Outside service area, wrong scope, or lead declined pricing.
8. Closed Won ✅	Goal	**Job booked!** Customer confirmed, scheduled, and handed to operations.

5 Team Best Practices

⏱️ Reply in Under 5 Minutes

The auto-responder acknowledges the lead instantly, but a real personalized quote from a human within 5 minutes converts at over **3× the rate** of slower follow-ups. Speed wins.

📱 Capture Phone Number Early

If the lead has no phone, make getting their number your first goal: "*To prepare your flat-rate quote, what's the best cell number and address?*"

Capable Clean Location ID	s94e80clit6bCL9VBWgl

ℹ This single Render bridge is **multi-tenant** — one server handles all client locations simultaneously. To add a new client location, include their `location_id` in the Zapier payload and add their GHL token to Render environment variables as `GHL_TOKEN_<LOCATION_ID>`.
